

House Slippers for 80 cm/31.5" Lusion from Dollmore
by Answer42

7/2020

Materials: fabric, 5.5 inches of 1/4" elastic for each slipper, optional: felt, fleece, etc. for sole insert

Note: I started with YouTube's "The DIY Mommy" free baby slipper pattern. I enlarged and narrowed the sole and upper and lengthened the heel section and elastic to fit Lusion.

Notes:

Use 1/4 inch seam allowance on all seams except for 1/2 inch heel casing and 1/8 inch top stitching on toe.

Using a fabric that looks the same on both sides such as solids or batiks will make this project easier.

Cut out 5 pieces for each slipper: 2 soles, 1 heel and 2 toe sections. Transfer alignment marks to pieces. If desired, cut 2 lining pieces for soles, using felt, fleece or extra fabric layers.

Fold heel piece in half lengthwise and press. Measure 5.5 inches of 1/4 inch elastic but don't cut yet. Sandwich elastic in heel piece, butting elastic against fold. Secure tip of elastic in place with straight or zigzag stitches. Keeping elastic against fold, sew 1/2 inch from fold, making a casing. Pull elastic taut until the 5.5 inch mark shows at edge of fabric. Sew end of elastic in place. Cut elastic even with fabric edge.

(If desired, you can make the casing first, then thread elastic through casing. My method is faster and easier for me.)

Make a fabric sandwich by placing a toe piece right side up with the heel piece in the middle and a toe piece right side down on top: meet and pin heel side A-A to straight edge A-A of toe piece with toe piece right side up. Bend the heel piece into a U-shape. Meet and pin heel B-B side to straight edge B-B of toe piece. Pin second toe piece right side down over heel piece, meeting straight edges of toe pieces, finishing the fabric sandwich.

(Refer to "How to sew soft baby slippers" by "The DIY Mommy" on YouTube.)

Sew through all layers. Press seam. Turn right side out. Press seam. Top stitch about 1/8" from seam edge.

Make a sole sandwich: one sole piece right side down, sole insert piece, if desired, and one sole piece right side up. Pin sole to upper, with the outside of slipper on the inside of pinned assembly. Match alignment marks and pin well, easing seam allowances around curves. Make sure all 4 fabric layers are pinned together. Sew with 1/4 inch seam allowance around slipper. Press seam. Trim and notch seam allowance. Turn right side out and push seam in place with fingers or appropriate tool.

You're done! Make second slipper.

Have fun!
